

Critical Infrastructure

When there's no time for downtime, you need to know that your next lighting, building or electrical project won't disrupt your operations.

Power forward, without shutting down.

When your infrastructure or assets are essential to people's health, safety, security or economic well-being, they can't be compromised.

At Enviri, we understand that some industries have more at stake than others. They can't hit pause for a building upgrade or retrofit; in fact, going without power, hot water, HVAC or lighting, even temporarily, could be disastrous to business, patients, staff, production, you name it.

With over 20 years' experience working with clients with critical infrastructure, we can deliver transformative energy solutions with minimal risk and maximum impact.

We work with clients from a range of sectors.

- Health and long-term care
- Public transportation
- Information technology and telecommunications
- University and school campuses
- Emergency services
- Municipal water and wastewater facilities
- Community centres
- Electrical distribution companies
- Food and agriculture
- Government facilities

Critical systems require critical attention.

What you get with Envari

Initial Assessment

We'll start your project by defining a clear vision for success together. This includes taking the time to truly understand your operations, infrastructure and goals. Based on your project needs, we'll assemble a team of highly specialized individuals and ensure you have the best people in your corner.

Preliminary Design

From here, we'll map out your entire project and identify possible risks, putting the right contingency plans in place. We'll gather and analyze data to prepare an initial design and engineering plan, collaborating with you to capture every detail.

Detailed Design

We'll inspect your project from every angle to ensure every detail is accounted for. We'll take a highly collaborative approach to determine what's feasible and how to minimize downtime on your business.

Competitive Pricing

When it comes to critical systems, you can't compromise on quality, but quality doesn't have to come at a premium. We'll prepare a detailed scope of work to help you get the best results at the best price, taking extra care to factor in any supply-chain challenges.

Scheduling

We understand that timelines can be sensitive when dealing with critical systems. That's why, when managing your project's schedule, we'll take extra care to ensure there are no surprises, and to align all parties around timing and tie-in points.

Construction

In the construction phase, coordination is key. We'll manage all contractor activities with vigilance to ensure what's planned and designed is delivered with minimal impact to your ongoing business operations. We'll stay in constant communication from start to finish, including through the commissioning phase, keeping you updated every step of the way.

Completion

We'll handle all final inspections, authorizations, approvals and permits. When the project is complete, we're not finished. We stay connected as we're committed to your long-term success.

Envari is extremely quick to address any issues and has a unique skill set that has been instrumental in avoiding unnecessary delays in getting these projects online and commissioned. I can't think of anyone I'd rather have as a partner.
