

**Design and
Engineering Services**

Take your building from ordinary to extraordinary

Discover what forward-thinking
design and engineering can do.

Take your sustainable engineering project from concept to reality

From Building Services Engineering, Green Building Initiatives, Commissioning, Multidisciplinary BIM Design and CAD Services, to Project Management, and beyond, Enviri provides holistic design and engineering services, working with you to develop detailed designs, action plans and cost projections focused on delivering energy, water and gas savings.

Peace of mind for your sustainable building project

Turnkey and Worry-Free

Innovation and Expertise

Sustain and Save

A complete range of sustainable design and engineering services for all systems in your building.

Let us help you reduce the costs of your utilities and make your building more attractive to own, operate and lease. We'll evaluate your existing system and your needs, design and take care everything necessary to deliver your project and have it built to our design specifications.

+ BIM Design | CAD Services

Building Information Model (BIM) Designs, Computer-aided Design (CAD) Services and virtual building walkthroughs.

+ Commissioning

Ensuring your building systems installations meet the planned design and don't stray from that design intent.

+ Green Building Initiatives

Meet sustainability requirements, achieve a green building certification, and ensure your building is as green as possible.

+ Electrical Design

Planning, creating, testing and supervising the development and installation of electrical equipment.

+ Mechanical Design and Engineering

Address all of your building's non-electrical systems with solutions to improve the operation of your building.

+ Project Management

Our practice includes a comprehensive range of services that include planning, risk mitigation, and schedule optimization.
